

## Vehicle Trackers

When it comes to vehicle tracking, we rely on two trusted solutions tailored to your needs.

For personal vehicles and high-security applications, we install the Scorpion S5 tracker—our go-to system for dependable, insurance-recognised protection.

For fleet environments, we use Track 24, a flexible and cost-effective solution designed to give businesses better visibility over vehicle usage, mileage, and operational data.

Trackers are highly effective, can positively improve your insurance rates and of course lead to the recovery of your vehicles.

We are also on hand to discuss any requirements or questions you may have.
